DETAILED ACTION

Election/Restrictions

1. Claims 1-56 are allowable. The restriction requirement between species, as set forth in the Office action mailed on 06/28/2007, has been reconsidered in view of the allowability of claims to the elected invention pursuant to MPEP § 821.04(a). **The restriction requirement is hereby withdrawn as to any claim that requires all the limitations of an allowable claim.** Claims 4-11,13-16,19,21-23,28-35,37-40 and 44-56, directed to alternate species are no longer withdrawn from consideration because the claim(s) requires all the limitations of an allowable claim. However, claims 57-63, directed to a non-elected species are withdrawn from consideration because they do not all require all the limitations of an allowable claim.

In view of the above noted withdrawal of the restriction requirement, applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 10/31/2008 was filed after the mailing date of the non-final rejection on 09/18/2008. The submission is in

Art Unit: 2853

compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Allowable Subject Matter

3. Claims 1-56 are allowed.

4. The following is an examiner's statement of reasons for allowance:

The primary reason for the allowance of claims 1-56 is the inclusion of the limitation of an image forming apparatus that includes a phase control unit that controls said first and second pixel clocks such that a respective rising period of said first and second pixels clocks is set shorter or longer than a normal clock period a predetermined interval after detection of a respective synchronization detection signal, said phase control unit controlling said first pixel clock independent of said second pixel clock and controlling said second pixel clock independent of said first pixel clock. It is this limitation found in claims 1,17,24,41 as it is claimed in the combination of, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2853

(US 2002/0051137) discloses a phase comparing circuit for adjusting clock phase in an imaging apparatus.

(US 2003/0067533) discloses a method for phase shifted pixel clocks in an imaging unit.

(US 2003/0058479) discloses a comparison circuit accommodating for pixel delay in images.
